1. Sample SPA configured with Auth0 tenant for authentication

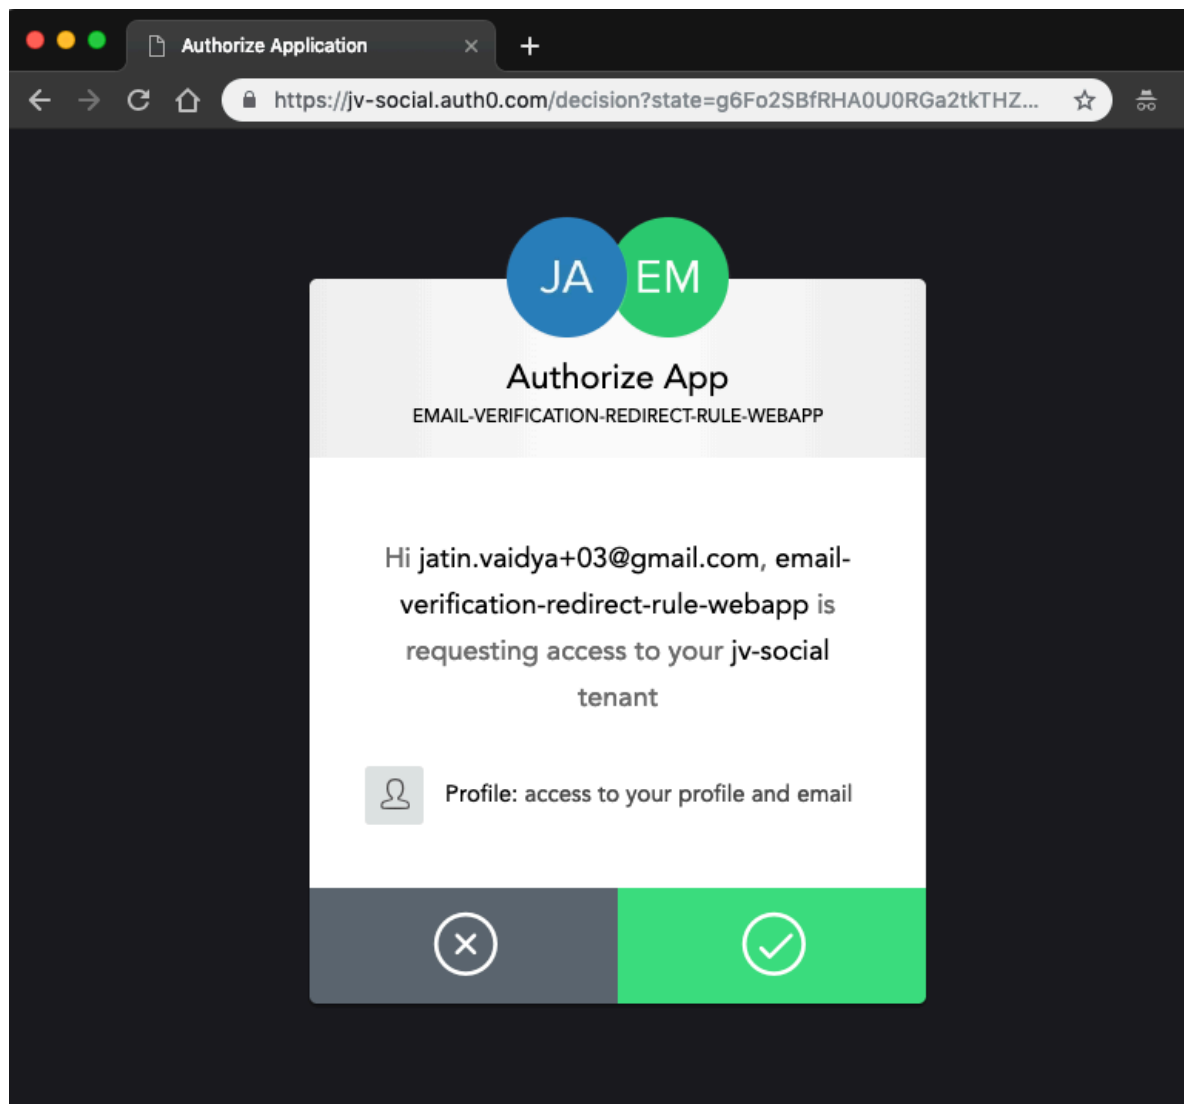

2. Sign-up new user

– Post sign-up, lock will login the user
– Redirect Rule will kick-in redirecting user to custom web app
– User get SSOed into this custom web app as they already have an active Auth0 session.

3. Consent page for custom web app which handles redirect

– Upon consent, this web app will open email verification ticket for user

4. Show email verification link (TESTING ONLY - this link MUST be sent to user mailbox instead)
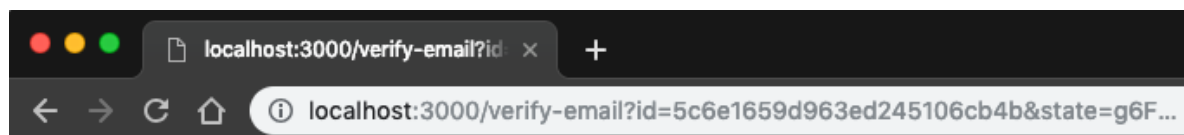

For TESTING convenience, we are displaying the email verification link on this page

Instead, this link MUST be sent to user emailbox with appropriate instructions/text
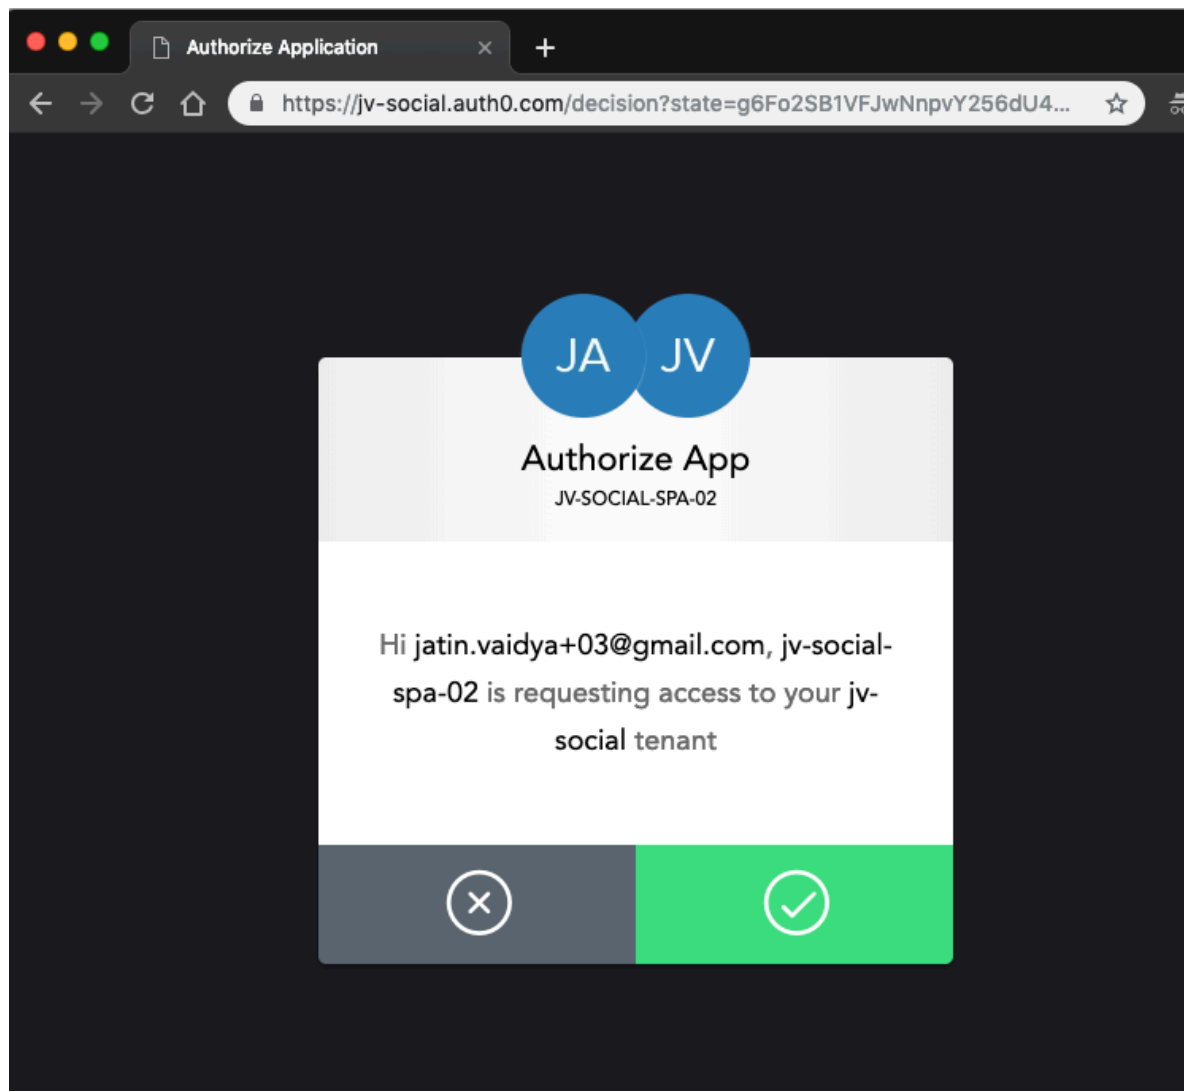

click to verify your email

You will not be asked for username/password again in this session

Here is what the verification link looks like:
https://jv-social.auth0.com/lo/verify_email?

ticket=0klhmSyajtc9DcjJPa7gq4FT2QqBCQ8a#

5. Consent (SPA)

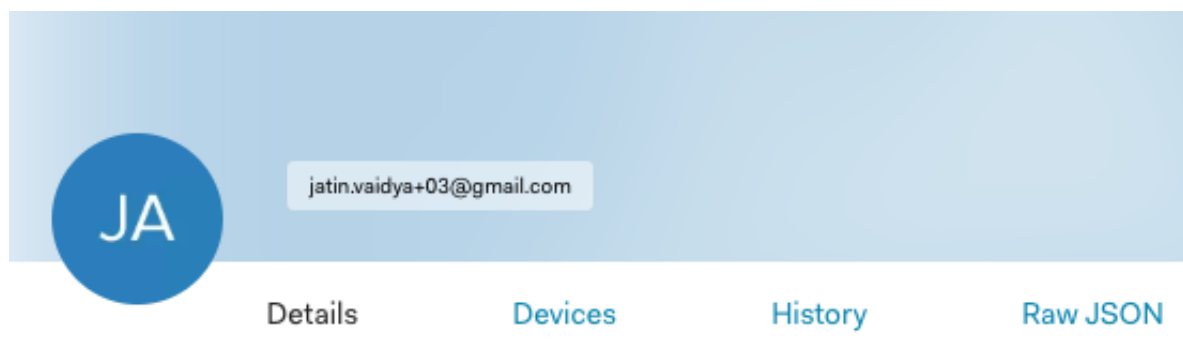

6. Log In flow to SPA resumes and user login is complete

You are logged in!

7. Just checking on management dashboard that email is verified.
